EDSON BRENNO RIBEIRO DE SANTANA

Dias d'Ávila, BA, Brazil | (71) 99647-4837 | brennorebeiro@gmail.com
LinkedIn: linkedin.com/in/edsonbrenno | GitHub: github.com/edsonbrenno | Portfolio: edson-brenno.github.io/portifolio/

PROFESSIONAL SUMMARY

Mid-Level Back-End Python Developer with 5 years of experience building scalable web applications, RESTful APIs, and microservices using **Python (FastAPI, Django, Flask)** and **Java (Spring Boot)**. Specialized in database schema design and optimization with **PostgreSQL** and **MongoDB (NoSQL)**, asynchronous background task processing (**Celery, Redis, RabbitMQ**), and data pipeline (ETL/ELT) development. Hands-on experience with Linux VPS administration, Docker containerization, CI/CD pipelines, and software engineering best practices (automated testing with **pytest**, Code Reviews, Pair Programming, and Agile/Scrum/Kanban). Fluent in technical English (B2).

PROFESSIONAL EXPERIENCE

Zrn Tecnologias | *Mid-Level Back-End Developer*

Dias d'Ávila, BA, Brazil | 07/2024 – Present

- Architected and deployed 9 autonomous microservices in Java/Spring Boot and Python, ensuring database independence and high system resilience.
- Built a centralized Kong API Gateway and Python authentication service, delivering a secure single entry point for isolated multi-tenant environments.
- Structured layered architecture (Controller, Service, Repository, DTO) applying SOLID principles and Design Patterns, reducing bug maintenance time by 30%.
- Developed independent RESTful APIs in Python (FastAPI) and integrated RabbitMQ, Celery, and Redis for asynchronous task queues, optimizing background processing.
- Built event-driven ETL pipelines for real-time data synchronization with e-SUS, establishing automated CI/CD pipelines and Docker containerization on Linux VPS servers.
- Collaborated in agile squads (Scrum/Kanban) conducting Code Reviews, Pair Programming, and automated testing to ensure software quality, legibility, and maintainability.

TemMais Gestão | *Python Developer*

Mata de São João, BA, Brazil | 12/2021 – 07/2024

- Engineered automated web scraping solutions in Python, optimizing data collection cycles from 4 days to 3 hours.
- Structured end-to-end ETL pipelines for data ingestion, validation, and persistent storage in PostgreSQL databases.
- Developed scalable web applications using Django (MVT architecture), adhering to Object-Oriented Programming (OOP) and Clean Code standards.

Prefeitura de Mata de São João | *Systems Analyst / Data Engineer*

Mata de São João, BA, Brazil | 09/2021 – 07/2024

- Engineered automated healthcare data ETL pipelines using Python (Pandas, SQLAlchemy) and PostgreSQL, accelerating report access from 4 months to 1 day.
- Optimized PostgreSQL data ingestion using in-memory bulk loading (io.StringIO), slashing processing time from 30 to 5 minutes (83% performance gain).
- Applied OOP concepts and disk I/O optimization techniques to build reusable data infrastructure, shortening delivery cycles from 3 days to 1 day.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, FastAPI, Django, Flask, Java, Spring Boot, HTML5, CSS3, JavaScript.
- **Databases & Messaging:** PostgreSQL (Optimization, Bulk Load), MongoDB (NoSQL), Redis, RabbitMQ, Celery.
- **DevOps & Cloud Tools:** Linux (VPS Administration), Docker, CI/CD, Git, GitHub, Kong API Gateway, RESTful APIs, Microservices.
- **Engineering & Practices:** Software Testing (pytest, JUnit), Code Review, Pair Programming, OOP, SOLID, Design Patterns, Scrum, Kanban, ETL/ELT.

EDUCATION

- **B.S. in Computer Engineering** – Unijorge (In Progress)
- **B.S. in Systems Analysis & Development** – UniCesumar (Completed: 12/2021)
- **MBA in Information Security** – Faculdade Descomplica (Completed: 06/2023)

LANGUAGES & CERTIFICATIONS

- **Languages:** Portuguese (Native) | English (Intermediate B2 - Fluent in technical reading, writing, and comprehension).
- **Certifications:** AWS Certified Developer - Associate (Active preparation – Expected completion: 01/2027).
